## Seminar Qualification of Teachers

Duration: Depending on requirements

Up to 20 participants

Vocational teachers have a significant influence on the learning outcomes of their students. They convey specialised content, support young people in their learning process and regularly assess their skills.

The requirements for teachers in vocational education and training are manifold: they must know the latest technologies, be able to operate tools and machines and instruct students on how to operate them. They need experience in teaching professional learning content (digital and analogue), advise students in career guidance and have access to networks and companies.

The training concept for vocational school teachers includes:

- **Modern teaching/learning methods (digital and analogue)**
- **Feedback and classroom development**
- **Competence based learning and teaching (CBT)**
- **Development of curricula**
- **Learning theories**
- **Basics/Fundamentals of a cooperative training approach**
- **Development and maintenance of networks to private companies**
- **Vocational guidance and counselling**
- **Occupational safety and environmental protection**
- **Maintenance of workshops**

Participants actively participate in our training courses. The trainer takes on a moderating role. The aim is to enable the participants to apply theoretical concepts, techniques and methods in their daily work. For this purpose, practical exercises based on simulations are integral part of the courses. Our teacher training may be designed either for generic subjects or tailored to subject specific needs.

During the **planning of the seminar** we will adjust our offer according to your needs in the best possible way.

Our trainers speak English, French, Spanish and Russian and avail of international experience in the qualification of your teaching personnel.

The **modular training concept** allows for a flexible programme design according to your needs.

In addition to the on-site training, we offer e-learning or blended learning solutions.

The participants may come from one school as well as from different schools.
